Business Analyst - Automation Developer  
Bournemouth

## Summary

I have a wealth of real world experience across many organizations. I take ownership and responsibility for the end-to-end process surrounding a project/request, from gathering and documenting requirements, developing solutions, testing, deployment and closure documentation including accompanying user guides. Business Analysis process automation is and will be increasingly required to fill this gap into the future. Working frequently with accountants and finance analysts, I have considerable automated reconciliation experience as well in both finance and generally, in data analysis as a whole.

I have worked across different industries successfully performing Business Process Automation, Software App Development and Analyst Development/Programming for companies such as Nissan Europe, NHS, Aegon Financial Services, Shell Oil, Old Mutual Insurance, UK Gov, to name a few. I am dedicated, reliable and always finish what I start where it is in my power and authority to do so. I am an effective communicator on all staff levels from ground level, through director level.

## Experience

St James's Place Wealth Management – Feb 2022 - Current  
Excel VBA – Ops improvement and Automation Analyst

Working on behalf of St James's Place Wealth Management to provide for their client investors, in developing automated software solutions on the fly, as required. This is one of many services they offer to their clients in order to make administration as easy as possible for the investor clients to manage their portfolios. Extensive use of Excel and VBA using all manner of active X controls in Windows forms like text-boxes, combo-boxes for dropdown listings, powered by buttons for automation, scrolling for navigation, and validated data entry for standardization control, etc... Also incorporating formula calculations to determine values of multiple numerical inputs. All powered backend by VBA coding routines.
